

Mr. Este's Viking Runes: Challenge 2

Here's how they work:

Each stick on the right is worth 1. Each bent stick to the right is 5.
 Each stick to the left is worth 10. Each bent stick left is 50.

Examples: $\begin{array}{l} \diagup \\ | \\ \diagdown \end{array} = 24$ $\begin{array}{l} \diagup \\ | \\ \diagdown \end{array} = 35$ $\begin{array}{l} \diagup \\ | \\ \diagdown \end{array} = 47$ $\begin{array}{l} \diagdown \\ | \\ \diagup \end{array} = 54$ $\begin{array}{l} \diagdown \\ | \\ \diagup \end{array} = 99$

Can you answer these?

- a. $\begin{array}{l} \diagup \\ | \\ \diagdown \end{array} \times \begin{array}{l} \diagup \\ | \\ \diagdown \end{array} =$
- b. $\begin{array}{l} \diagup \\ | \\ \diagdown \end{array} \times \begin{array}{l} \diagup \\ | \\ \diagdown \end{array} =$
- c. $\begin{array}{l} \diagup \\ | \\ \diagdown \end{array} \times \begin{array}{l} \diagup \\ | \\ \diagdown \end{array} =$
- d. $\begin{array}{l} \diagup \\ | \\ \diagdown \end{array} \times \begin{array}{l} \diagup \\ | \\ \diagdown \end{array} =$
- e. $\begin{array}{l} \diagup \\ | \\ \diagdown \end{array} \times \begin{array}{l} \diagup \\ | \\ \diagdown \end{array} =$
- f. $\begin{array}{l} \diagup \\ | \\ \diagdown \end{array} \times \begin{array}{l} \diagup \\ | \\ \diagdown \end{array} =$
- g. $\begin{array}{l} \diagup \\ | \\ \diagdown \end{array} \times \begin{array}{l} \diagup \\ | \\ \diagdown \end{array} =$
- h. $\begin{array}{l} \diagup \\ | \\ \diagdown \end{array} \times \begin{array}{l} \diagup \\ | \\ \diagdown \end{array} =$

Challenge: If I told you that this $\begin{array}{l} \diagup \\ | \\ \diagdown \end{array}$ was 436, could you work out your own questions?
